What Fuels Your Power?

RATE OPTIONS

UPPCO's electric rates for residential customers are based on the type of service a customer receives. For commercial UPPCO customers, electricity rate class is based on how you use your electricity service. A complete listing of rate schedules, rules, and regulations for the state of Michigan is available at uppcocom.

Standard Residential Service (A-1)

Residential Service (A-1) is available if you live in a single-family dwelling, duplex or apartment and the energy you consume is for residential use. Most residential customers qualify for this electric rate.

Commercial or Industrial General Service (C-1)

Available to commercial or industrial customers with a billing demand under 25 kW.

**Billing demand is the highest amount of electricity used over a 15-minute period during the billing month.*

Residential Heating Service (AH-1)

Residential Heating Service (AH-1) is available for residential customers who utilize permanently installed electric heating equipment as their primary source of heat. The rate that is charged under AH-1 is lower than the rate that is charged for standard Residential Service (A-1) for the energy that is consumed above 500 kilowatt hours (kWh) per month during the heating season (October - May).

Commercial Heating Service (H-1)

Available to commercial customers who use a permanently installed electric heating system as their primary heat source. During the heating season (October - May), usage over 1,000 kWh/month is billed at a lower rate than the general service (C-1) rate.

Seasonal Service

Seasonal residential properties may elect seasonal billing and receive a bill during six months of the year (May - October or November - April). If you only use significant amounts of energy six months of the year, such as with a summer cottage or a hunting camp, this rate option may be a good fit for you.

Light and Power Service (P-1)

Available to customers with billing demand between 25 kW and 200 kW. To qualify, peak demand must be at least 25 kW for three consecutive months and once in each following 12-month period.

Sales Tax Exemption Status

Qualified business customers are required to submit their *Michigan Sales and Use Tax Certificate of Exemption Form 3372* to UPPCO if they are claiming an exemption. This ensures we have the tax exemption status on file and are billing you accordingly. For the MI Tax Exemption Form, visit uppcocom/forms. For more info about tax exemptions, visit the Department of Treasury website: michigan.gov/treasury

2026 APPLIANCE RECYCLING EVENTS

Join us May through October at any of our 12 Appliance Recycling Drop-off Events

ee.uppcocom/recycle

Get paid to do the right thing:
Recycle your inefficient appliances!

Save space, energy and money while helping our environment.

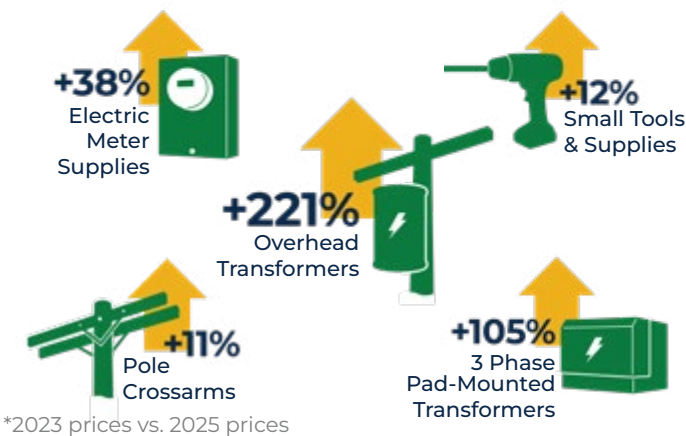

Appliance	Rebate
Refrigerator	\$50
Freezer	\$50
Dehumidifier	\$10
Mini-fridge	\$10
Room air conditioners	\$10

RATE PROPOSAL FILING

UPPCO is requesting Michigan Public Service Commission (MPSC) approval of the company's request to review and amend certain rates and conditions of service. This regulatory filing was submitted on May 22, 2026. If approved, the filing will address the under-recovery of revenue necessary to operate the electric utility in a safe and efficient manner. The under-recovery is being driven by the following:

- Increased operating expenses (fuel for company vehicles, purchased power, tree trimming and vegetation management, contractors, non-capital materials and supplies, metering, routine maintenance performed on the company's distribution and generation assets, etc.).
- Investments being made in infrastructure (poles, wires, electrical devices, technology, etc.) that enable the safe, efficient, and reliable delivery of energy to customers.
- Construction of system upgrades and new infrastructure necessary to support load growth and economic development throughout the region.
- Significant increases in the cost of equipment, materials, supplies, and labor related to the company's capital projects.

The filing includes an updated cost-of-service study/rate design and presents a plan that provides safe, reliable energy to customers. The MPSC has 10 months to review UPPCO's proposal and issue its decision in the case. Any adjustments to customers' rates resulting from the MPSC's decision will go into effect after the Commission's Order has been issued.

WHERE CAN I GET MORE INFORMATION?

WHAT FUELS YOUR POWER?

Electricity is a form of energy that is produced by generation facilities that use fuels like natural gas, nuclear, coal, or renewable fuels such as hydroelectric, solar, wind, and biological (wood fiber, methane, etc.). The graphic below illustrates where the electricity that UPPCO purchases to meet its customers' demand comes from and how UPPCO's energy portfolio compares against the Midwest regional average.

UPPCO Boney Falls Hydroelectric Dam

COMPARISON of Fuel Sources Used

The UPPCO Environmental Disclosure above is the average fuel mix of energy purchased and provided by UPPCO from April 2025 through March 2026. The fuel mix data for the electricity supplied by UPPCO assumes that the electricity purchased on the wholesale market has the same attributes as the regional fuel mix data from Michigan, Illinois, Indiana, Ohio, and Wisconsin.
